360 Visual Asset Surveys for Corporate Real Estate

Remodels...upgrades...asset verification...marketing programs...and more. When your program includes multiple site locations and you need an easy way for everyone on the team to see exactly what is at each site location right now, our 360 Visual Asset Surveys do just that.

Silvercloud Service's highly realistic 3D interactive Virtual Walkthroughs, Asset Tags, and Floor Plans let you give each of your stakeholders the benefits of a detailed site visit. All without physically being there and with the ability to "go back onsite" as many times as necessary.

Features

- **Virtual Walkthroughs** feel as real as being there. Navigation is seamless and intuitive, with the ability to zoom in on details with high resolution imagery.
- **Asset Tags** highlight key important features within a space with titles and embedded documents. Use Asset Tags to identify assets, objects, specific locations, and areas.
- **Floor Plans** are generated from information gathered during the scanning process. Ideal for plan-o-grams, marketing, planning, and more.

Benefits

- **Collaboration**
Get everyone on the same page, make faster and better decisions, enhance planning and design efforts, and answer important questions immediately.
- **Value**
Shorten schedules and simplify the process, minimize site visits and avoid costly go backs, simultaneously collaborate from many locations, verify assets, and confirm completed work remotely.

Differentiators

- **Specialization in Projects with Multiple Site Locations**
Planning and coordinating a program or project with a variety of site locations can be a challenge, especially when you are uncertain of existing conditions. Silvercloud Services specializes in creating 360 visual asset surveys for each location, ensuring each survey captures the same information, and is delivered in a consistent format.
- **Background in Project Management and Architecture**
Work with a partner who understands each of your stakeholders' needs for coordinating schedules, achieving critical milestones, and providing accurate and reliable deliverables.
